

## Tools of the trade...

My job is to make sure you continue being able to do your job. To that, conveyor belts need to move material and sleeves need to funnel material where material needs to move. Say that three times fast!

My responsibility dictates then that I have the equipment and workforce necessary to make

good on the deliverables and services you've come to expect from RK RUBBER. I make sure my shop floor is ready for whatever you may throw at RK. We fabricate, manufacture and fix *almost* all things rubber. We also hit the road when you need us on your shop floor. Our Field Service crew is dedicated and always ready to work.

“...so you can do your job”

Dell Gulknecht  
General Manager

## RK RUBBER – Industries served

Pulp & Paper

Food Processing

Construction

Aggregate

# RK RUBBER Equipment – *at the ready*

Traveling Head

Vulcanizer

UBR

Field Press

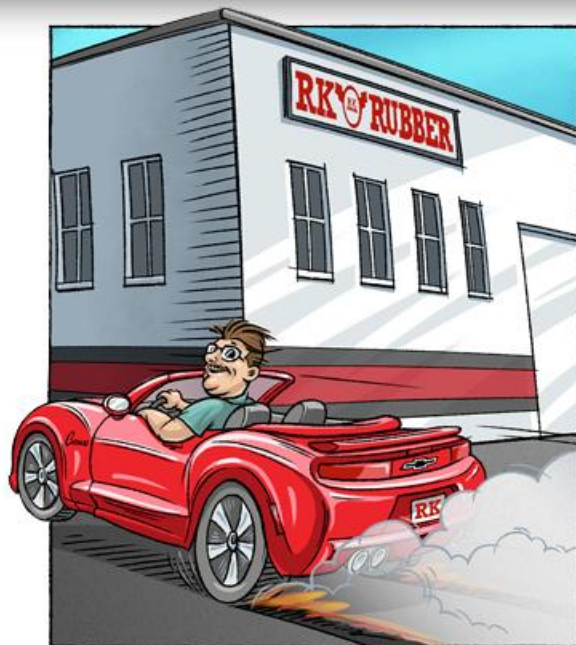

Longitudinal Press

[Capabilities video](#)

To handle the steady flow of unique fabrication situations requires a stable of technology advanced machinery that's up to the challenge. As Dell puts it: "I'm not aware of anyone else that does the amount of fabrication we do—or has as many machines to do it."

There's one particular "red machine" that Dell loves to use... when his wife lets him borrow her car!

DELL'S FAVORITE MACHINE  
FOR BURNING RUBBER!
