At RK Rubber, we excel at developing super-sized rubber solutions for mission critical projects. Many rubber fabricators in our industry do not have the capacity, equipment,

perform without failure. A long-time customer in the construction industry already knew that our gaskets had a reputation for 5-year life spans in tough conditions, so they brought us on-board to help solve their issue.

They asked us to design and fabricate a super-sized rubber gasket with a 14' OD and a 10' ID. Gaskets of this magnitude cannot be made in 1 piece due to eventual splicing failure. In addition to its massive size, the gasket had to perform in extreme conditions where extensive high-pressure water, mud, rock, and debris flowed past it. The gasket would ultimately be used for deep tunnel boring machines during big dig projects. We understood that any type of gasket failure could result in massive construction delays and wasted municipal dollars. This was a one-off job and it required thorough design and exceptional craftsmanship. Using diligent engineering and intricate fabrication techniques, our team successfully created a 168" OD gasket with six rubber segments that were each made from 1" thick neoprene stock.

or experience to work with large, heavy rubber stock. For over 115 years, we've built our reputation by solving problems with innovative, customized solutions that have to

**"The rings of Saturn have nothing on the GINORMOUS gaskets RK RUBBER fabricates on Earth!"**

We leveraged an array of fabrication and vulcanization processes to meet our customer's requirements. In addition, all of our work was performed under a tight deadline of less than two weeks. We also assisted them with developing a suitable transportation plan that ensured the gasket would arrive on-site as quickly as possible. The project was a resounding success, and we continue to assist them with large-scale gasket manufacturing for various municipal construction projects.
