Give 'em a break!

Move over, slow down and be aware. I try to be mindful and put those driving habits into practice whenever I'm going through a construction zone. Amazing how those construction workers can compartmentalize the constant traffic flying by and still concentrate on their serious work at hand... a tip-of-the-hardhat on that.

I imagine cars and trucks zippin' through my shop floor, that would definitely change the whole work environment of the place. So next time you're cruising through a construction zone, think about speeding vehicles driving through your office space and then empathize a bit.

We'll do our best here to keep fabricating the rubber parts integral in the construction industry; keeping heavy equipment moving so that you can too.

Dell Gutknecht
 General Manager

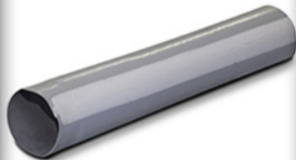

Quick Turn-around Time!

Belt fabrication lead time is weeks not months!
