

Gaskets • Sleeves • Vulcanizing • Conveyor Belts • Fabrication • Die Cutting • Seals

We're rolling into June which means we're rolling into summer. It also means things are going to get hot. The weather is shifting gears, and the thermometer will tell you it's getting hotter outside.

And those orange barrels I've been talking about lately will be cookin' too; construction sites (especially those along the roads) reach record temperature highs during summer.

Hottest of all are the deadlines for rubber parts. We hear it every day, "fix it, replace it, fabricate it and ship it... yesterday if possible!" The craftsmen at RK RUBBER understand that. We've built a reputation in the industry for fast turnarounds on the parts you need to keep your cool – when the heat is on.

HOT, HOT Rubber Parts!

HOT, HOT Turnaround Time!

Our belt fabrication lead time is weeks not months!

[Belt info](#)

HOT, HOT Construction Season!

WE CAN DO:

- Rubber skirting/flashing
- Rubber discharge aprons
- Belting
- Vulcanized splices
- Super screw splices
- Rip repair fasteners

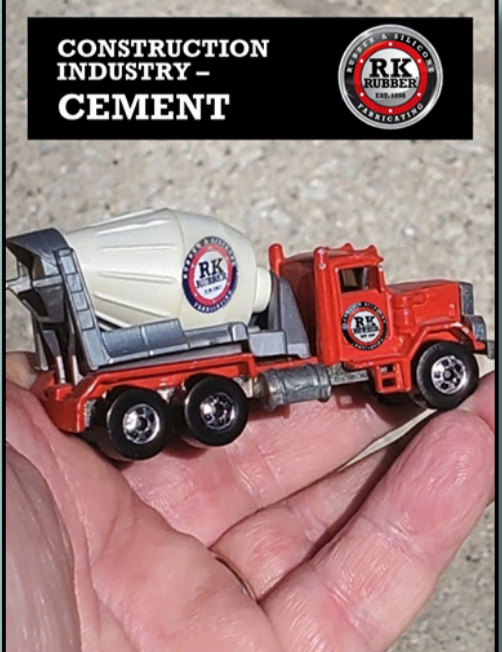

HOT, HOT Wheels!

We fabricate the rubber parts that help keep cement trucks pouring, site after site after site.

HOT Tip –
Hot Wheels toy metal cars and trucks made from 1968 to 1977 feature "redlines" or red stripes across the tires. Since they stopped using Spectraflame paint and marking the tires with red lines after 1977, these collectible Hot Wheels are more valuable than today's cars. Hope you didn't trash yours... do a search and see what your old redlines are worth!

EXPERIENCE = Solutions
